AP CSP Unit 6 Day 4-5 Assessment

1. (DOK 1) Which stage of the data science process involves inspecting data for inconsistencies and duplicate entries?

A. Planning

B. Data Collection

C. Data Cleansing

D. Recommendation

2. (DOK 1) Where can survey response data be downloaded for analysis?

A. Word

B. PowerPoint

C. Microsoft Forms into Excel

D. Paint

3. (DOK 1) What should be done with incomplete data that cannot be corrected?

A. Visualize it

B. Delete it

C. Duplicate it

D. Publish it

4. (DOK 1) Which product can be used to create an infographic according to the lesson?

A. Notepad

B. PowerPoint

C. Calculator

D. Access only

5. (DOK 2) Why is white space important in an infographic?

A. It helps prevent the infographic from appearing crowded

B. It increases the amount of data collected

C. It proves causation

D. It replaces graphics

6. (DOK 2) A student creates an infographic for teachers. Which design consideration is most important?

A. Target audience

B. File size

C. Computer model

D. Survey password

7. (DOK 2) Why should multiple chart types be explored during analysis?

A. To find ways to communicate patterns and relationships effectively

B. To increase responses

C. To create duplicate data

D. To avoid cleaning data

8. (DOK 3) A survey shows students who exercise more report lower stress levels. How should this finding be presented?

A. Exercise definitely causes lower stress

B. Correlation exists, but causation may require more research

C. The survey proves the relationship

D. The data should be ignored

9. (DOK 3) A peer review finds that an infographic has strong data but poor organization. Which rubric area should be improved?

A. Graphics

B. Organization

C. Presentation

D. Grammar

10. (DOK 4) A team downloads survey data, removes invalid entries, analyzes trends with several chart types, designs an infographic for a specific audience, cites data sources, and presents recommendations. Which statement best describes the project?

A. Only data visualization was completed

B. The team completed multiple stages of the data science process and communicated findings effectively

C. The project focused only on survey collection

D. The team proved all observed correlations were causal
