AP CSP Unit 6 Day 2 Survey Design Assessment

1. (DOK 1) Which type of data is numerical and collected through counting or measuring?

A. Qualitative data

B. Quantitative data

C. Categorical data

D. Biased data

2. (DOK 1) Which Microsoft Forms question type is commonly used to gauge opinions on a scale from strongly disagree to strongly agree?

A. Text

B. Multiple Choice

C. Likert

D. Ranking

3. (DOK 1) What does PII stand for?

A. Personal Internet Information

B. Personally Identifiable Information

C. Private Identity Indicator

D. Protected Individual Input

4. (DOK 1) According to the lesson, what should be added to multiple-choice questions to help reduce bias when options may be incomplete?

A. Branching

B. Required setting

C. Other option

D. Ranking

5. (DOK 2) Why are open-ended text questions often harder to analyze than multiple-choice questions?

A. They collect qualitative responses that can vary widely

B. They cannot be answered

C. They only allow numbers

D. They create automatic charts

6. (DOK 2) A researcher wants detailed opinions from participants. Which data collection method would be most appropriate?

A. A/B testing only

B. Focus group or interview

C. Net Promoter Score only

D. Telemetry

7. (DOK 2) Why is it important to provide meaning for values on a rating scale?

A. To make the survey longer

B. To ensure respondents understand what each rating represents

C. To collect PII

D. To prevent branching

8. (DOK 3) A survey asks, “How much time do you waste on social media?” What is the primary problem with this question?

A. It is too short

B. It collects quantitative data

C. It introduces bias by assuming social media use is wasteful

D. It lacks answer choices

9. (DOK 3) A student surveys only close friends who share the same opinion on a topic. How could this affect the results?

A. The survey will be more ethical

B. The results may be biased because the sample lacks diverse viewpoints

C. The survey becomes anonymous

D. The data becomes quantitative

10. (DOK 4) A team is creating a survey about student technology use. Which approach best follows the survey rubric and data ethics principles?

A. Use neutral questions, collect only necessary information, explain how data will be protected, and include balanced answer choices

B. Collect as much personal information as possible and keep the purpose hidden

C. Survey only students who agree with the team's opinion

D. Use leading questions to encourage desired answers
